SCHULAMID® 66 MT5 HI LS silver

The Oscar winner amongst the plastics

SCHULAMID 66 MT5 HI LS silver is a UV-stabilized engineering compound with improved impact strength, which enables tough, top quality metallic components to be manufactured in a single process. By adding innovative colour pigments during the moulding process a superb metallic appearance is achieved. This eliminates the high cost of painting the component.

The cutting edge combination of machinery and machine technology can also dramatically reduce the visibility of flow lines and seams. Montaplast has incorporated this process into its serial production of radiator grilles for the new Mercedes CLS. The grille won first prize in the automotive body exterior category of this year's coveted SPE awards!

Outstanding production line advantages

- Single-process manufacture
- No painting necessary
- Cost reduction and process improvement
- Better for the environment

Exceptional features

- Reduction of visible seams and flow lines
- High impact strength
- No chipping of paint
- Excellent UV-stability
- Improved road salt resistance
